

Silent Steel Safe-Guard installation (QD suppressors only)

Install the Safe-Guard on the Streamer suppressor. Make sure that the Safe-Guard is at the bottom and in a straight line with the suppressor. Tighten the six locking screws with a 2mm hexagonal key (included). The maximum torque is 1,5NM. Do not over tighten, as it might damage the Quick Detach thread.

The Silent Steel Safe-Guard is delivered with a pouch. The pouch is made from heat-resistant materials, and you can store a hot suppressor with Safe-Guard in it.

Silent Steel heat resistance (AR15 5.56 NATO, 3 shots/sec, 30-round magazine)

1. Magazine - suppressor temperature: 110°C, Safe-Guard temperature: 10°C
2. Magazine - suppressor temperature: 220°C, Safe-Guard temperature: 30°C
3. Magazine - suppressor temperature: 400°C, Safe-Guard temperature: 68°C
4. Magazine - suppressor temperature: 520°C, Safe-Guard temperature: 117°C

Note: Locking screws will make a round mark on the cerakote surface.
